

Finance page — build brief

OIL India dashboard · for AI engineer · agent build

Scope

Single finance page. Default view = **Standalone**; hover (or tap on mobile) on any KPI card reveals the **Consolidated** figure as a tooltip. A global toggle in the page header switches the whole page between Standalone and Consolidated. Currency in ₹ crore. Fiscal years FY21–FY25.

Section 1 — KPI strip

One segment, 5 cards, FY25 with YoY arrow. Hover reveals consolidated.

Metric	FY25 standalone	FY24	YoY	FY25 consolidated (hover)
Total income	23,987	24,514	-2.2%	37,830
EBITDA	10,636	11,643	-8.7%	12,824
PBT	7,851	6,745	+16.4%	9,436
PAT	6,114	5,552	+10.1%	7,040
Net profit margin	27.64%	25.09%	+255 bps	19.47%

Footnote chip on PBT/PAT: “FY24 included ₹2,363 cr exceptional item (GST on royalty, sub-judice).”

Section 2 — Trends (5-year, FY21 → FY25, standalone)

a · Earnings trend

Grouped bars (total income + EBITDA) with PAT overlay line.

Metric (₹ cr)	FY21	FY22	FY23	FY24	FY25
Total income	10,561	16,428	24,758	24,514	23,987
EBITDA	3,208	7,266	11,176	11,643	10,636
PAT	1,742	3,887	6,810	5,552	6,114

Toggle: “Adjust FY24 for exceptional item” — restates FY24 PAT excluding the ₹2,363 cr provision so the trend reads cleanly.

b · Margin trend

Two lines on a single chart.

Margin (%)	FY21	FY22	FY23	FY24	FY25
EBITDA / Revenue	30.4	44.2	45.1	47.5	~44.3
PAT / Revenue	16.5	23.7	27.5	22.7	25.5

c · Realizations vs production

Dual axis: price lines (crude \$/bbl, gas \$/MMBTU), volume bars (crude MMT, gas MMSCM).

Driver	FY21	FY22	FY23	FY24	FY25
Crude realization (\$/bbl)	43.98	78.96	TODO	83.03	78.09
Gas price (\$/MMBTU)	2.09	2.35	TODO	6.50	6.50
Crude production (MMT)	2.96	3.01	3.18	3.36	3.46
Gas production (MMSCM)	2,642	3,045	3,180	3,182	3,252

TODO for engineer: extract FY23 crude and gas realizations from Annual Report 2022-23 in project knowledge.

f · Cash flow, capex & exchequer

Grouped bars.

Metric (₹ cr)	FY21	FY22	FY23	FY24	FY25
Operating cash flow	1,801	6,005	7,660	7,715	TODO
Capex (plan expenditure)	4,655	4,367	5,534	5,907	18,170*
Contribution to exchequer	3,690	6,675	12,330	11,418	11,232

* FY25 capex shown is **group capex ₹18,170 cr** (includes NRL refinery expansion ₹9,109 cr). Annotate this on the chart so the jump is explained, not confused with standalone plan-expenditure trend.

TODO for engineer: extract FY25 operating cash flow from Annual Report 2024-25 cash flow statement.

Section 3 — Noteworthy items

Three static callout cards below the trend section.

1. **NRL earnings drag** — subsidiary PAT collapsed: ₹3,703 cr (FY23) → ₹2,160 cr (FY24) → ₹1,608 cr (FY25) on compressed refining spreads. Explains flat consolidated PAT vs growing standalone.
2. **Group leverage rising for growth** — group debt ₹18,549 cr (FY23) → ₹23,640 cr (FY24), funding the NRL 3 → 9 MMTPA refinery expansion. Still within the 45% internal gearing target (23% at standalone level in FY25).
3. **Gas price frozen at \$6.50/MMBTU** — unchanged for two consecutive years (FY24 and FY25). Earnings sensitivity now rests almost entirely on crude price and production volumes.

Section 4 — Key insights for leadership

Three accent-bordered cards (green / amber / red border-left), pinned at the bottom of the page or in a right rail.

1 • Volume, not price, is carrying earnings

FY25 PAT grew ~10% (₹5,552 → ₹6,114 cr) even though crude realization fell \$83.03 → \$78.09/bbl. Production at decade highs is the engine — crude 2.96 → 3.46 MMT and gas 2,642 → 3,252 MMSCM over five years. Gas price has been frozen at \$6.50 for two years, so there is no realization tailwind left. Any crude correction below ~\$70 hits the P&L with no offsetting cushion.

2 • Concentrated bet on NRL expansion

Standalone PAT grew 10% in FY25, but consolidated PAT was essentially flat (₹6,980 → ₹7,040 cr) because NRL profit has more than halved since FY23. The group deployed ₹18,170 cr capex in FY25, half of it (₹9,109 cr) into that same refinery, funded by rising debt. Standing question for the page: what refining spread does the expanded 9 MMTPA NRL need to clear its cost of capital, and what is the commissioning timeline risk?

3 • ₹2,363 cr litigation overhang + funding gap

The Service Tax/GST-on-royalty matter (₹2,363 cr exceptional item in FY24) is sub-judice at the Supreme Court — an adverse ruling could extend the liability. Separately, standalone operating cash flow (~₹7,700 cr) covers standalone capex and ~₹2,000 cr dividend, but does not cover group capex of ₹18,000+ cr. The gap is bridged by debt. Dividend capacity, the capex program, and the court outcome are now linked. Worth presenting as a sources-and-uses waterfall so the trade-off is visible before it is forced.

Engineering notes

- Standalone is the default view across all sections; consolidated only via the hover tooltip on KPI cards and via the global toggle in the page header.
- Global toggle re-renders the charts; hover-tooltip does not (card-level only).
- Chart (a) needs the “adjust FY24 for exceptional item” toggle — meaningfully changes the PAT line shape.
- Round every displayed number; ₹ crore for absolute amounts, % to one decimal for margins.
- Per-share metrics, if added later, must be restated post-bonus issue (July 2024, 1:2).
- All source figures are in the Directors’ Reports and the Five-Year Performance at a Glance sections of the FY21–FY25 annual reports in project knowledge.
- Two data gaps to fill from the PDFs before go-live: FY23 crude/gas realizations (AR 2022-23) and FY25 operating cash flow (AR 2024-25).

One-line page framing: *“Operationally the strongest in a decade; financially, the next two years hinge on refinery execution and crude staying above ~\$70.”*
